Preface

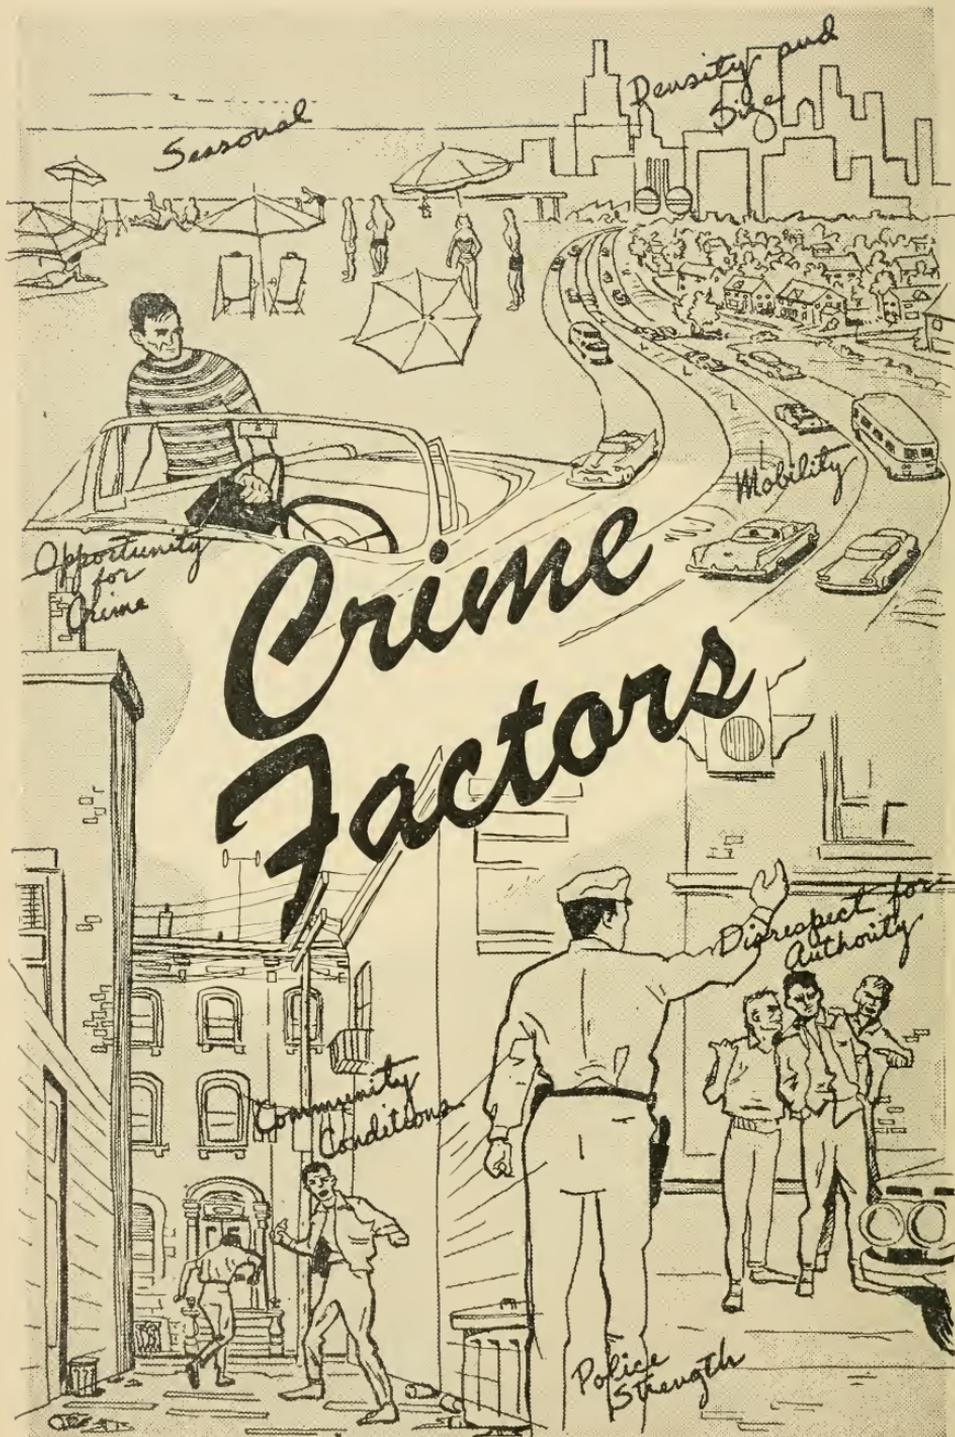

To the casual observer it may appear that law enforcement efforts to control crime are of little avail in the face of rising crime rates. Actually, the record shows police effectiveness remains high despite mounting crime workloads and heavier demands for a wide variety of increasingly complex police services. On the other hand, law enforcement machinery is impaired and policing is hampered as a result of the increasing restrictions being placed on enforcement operations.

Of vital consideration is the fact that a community's crime rate is primarily the product of its inhabitants—the victims as well as the perpetrators of crime. Law enforcement through its records statistically reports on local crime conditions as a part of its community responsibility. It should be kept in mind, however, that police efforts to control crime are limited to: prevention by exposing the nature of crime, principally the effect of contributing community factors; suppression through properly oriented and alert patrol activity; and deterrence through successful investigation and apprehension of the offender. The effectiveness of each of these depends to some extent on the action of the courts and the success of the correctional process, but most of all on the degree to which the local citizenry support law enforcement. Positive action to reduce crime must begin with the individual citizen.

Although many police departments are understaffed and others are quite small, it must be recognized that for any law enforcement agency basic records are essential to full productivity. Many police agencies are making valuable administrative and investigative use of their records. There are others which fail to maintain an adequate records system, resulting in a net loss in police performance and a loss not only to the community, but also to the law enforcement profession. Citizens must demand that public business, particularly police work, be done efficiently. It is even more essential that authorities responsible for such public operations assure that maximum results are obtained from available resources. The intelligent use of law enforcement records is a vital tool in meeting this objective.

A handwritten signature in black ink, reading "J. Edgar Hoover". The signature is written in a cursive style with a large, stylized initial "J".

JOHN EDGAR HOOVER, *Director.*

Uniform Crime Reports give a nationwide view of crime based on police statistics made possible by the voluntary cooperation of local law enforcement agencies. Since the factors which cause crime are many and vary from place to place, readers are cautioned against drawing conclusions from direct comparisons of crime figures between individual communities without first considering the factors involved. The national material summarized in this publication should be used, however, as a starting point to determine deviations of individual cities from the national averages. Crime is a social problem and the concern of the entire community. The law enforcement effort is limited to factors within its control. Some of the conditions which will affect the amount and type of crime that occurs from place to place are briefly outlined below:

Density and size of the community population and the metropolitan area of which it is a part.

Composition of the population with reference particularly to age, sex and race.

Economic status and mores of the population.

Relative stability of population, including commuters, seasonal, and other transient types.

Climate, including seasonal weather conditions.

Educational, recreational, and religious characteristics.

Effective strength of the police force.

Standards governing appointments to the police force.

Policies of the prosecuting officials and the courts.

Attitude of the public toward law enforcement problems.

The administrative and investigative efficiency of the local law enforcement agency.

Summary

(This section is for the reader interested in the general crime picture. Technical data, of interest primarily to police, social scientists, and other students, are presented in the following sections. If you wish assistance in the interpretation of any information in this publication, please communicate with the Director, Federal Bureau of Investigation, U.S. Department of Justice, Washington 25, D.C.)

Crime Capsule

In 1962, 2,048,370 serious crimes reported, a 6 percent rise over 1961.

Crime in past 5 years increased four times faster than population. Four serious crimes per minute recorded on the crime clock.

* * *

Auto thefts up 9 percent in 1962 with over 356,000 cars reported stolen. Average value \$866 per car.

Keys left in car or ignition unlocked in 42 percent of thefts. Over two-thirds of autos stolen at night.

* * *

Firearms used as fatal weapon in 54 percent of murders in 1962. Cutting instruments used in one of every four killings.

Murder highest in December, lowest in January.

* * *

Stolen property in 1962 valued in excess of \$650 million. Average value per robbery \$223, burglary \$192, and larceny \$76.

Loss from stolen property cut to 49 cents on a dollar by police recoveries.

* * *

Arrests for all criminal acts up 1 percent over 1961. Female arrests increased at faster pace than male arrests. Arrests of young people under 18 up 9 percent over previous year.

* * *

Average number of police employees of 1.9 per 1,000 inhabitants same as 1961.

Seventy-eight police killed in the line of duty, 48 killed as result of criminal action.

Crime Index Totals

During the calendar year 1962 there were an estimated 2,048,370 crimes of murder, forcible rape, robbery, aggravated assault, burglary, larceny \$50 and over and auto theft in the United States. These crimes are counted by law enforcement agencies as they become known to them and are utilized as the index to criminality in the United States. The 1962 total was 6 percent above the 1961 level, or 122,280 more serious crimes than the previous year.

Crimes against the person—murder and nonnegligent manslaughter, aggravated assault and forcible rape—make up 8 percent of the total offenses in the Crime Index and as a group increased 4 percent during 1962. The property crimes of robbery, burglary, larceny \$50 and over and auto theft rose 7 percent in volume and comprised 92 percent of the Crime Index offenses.

General crime increases were recorded in all cities when grouped by population size ranging from 5 percent in cities from 100,000 to 250,000 to 11 percent in cities with 500,000 to 1,000,000 inhabitants. The metropolitan counties surrounding large American cities recorded a crime experience similar to that of the cities with a 5 percent increase, whereas the rural counties reported an over-all 2 percent decrease. Geographically, the Crime Index trend ranged from a 9 percent increase in the Northeastern and Western states to 3 percent in the North Central states.

Crime index classification	Estimated number of offenses		Change 1962			
	1959-61 average	1962	Over 3-year average		Over 1961	
			Number	Percent	Number	Percent
Total.....	1,807,100	2,048,370	+241,270	+13	+122,280	+6
Murder.....	8,670	8,400	-270	-3	-200	-2
Forcible rape.....	15,860	16,310	+450	+3	+300	+2
Robbery.....	87,570	95,260	+7,690	+9	+3,600	+4
Aggravated assault.....	129,400	139,600	+10,200	+8	+6,580	+5
Burglary.....	789,300	892,800	+103,500	+13	+40,300	+5
Larceny \$50 and over.....	464,300	539,900	+75,600	+16	+41,800	+8
Auto theft.....	312,000	356,100	+44,100	+14	+29,900	+9

The above table sets forth the 1962 estimated crime figures for the country as a whole. As indicated by the above table, the 1962 nationwide crime trend was 13 percent above the average experience recorded during the 3-year period 1959-1961. With the exception of murder and nonnegligent manslaughter, all offenses show increases over the previous 3-year average, particularly the property crimes of larceny \$50 and over, auto theft and burglary. These latter offenses, if only because of their sheer volume, are serious crime problems both for the local police and the community.

Crime and Population

When our national population is related to the incidence of crime, a national crime rate of 1,102 serious offenses per 100,000 inhabitants is established. The crime rate in 1962 was 5 percent higher than that recorded in 1961. A crime rate merely takes into consideration the numerical factor of population and not the many other elements that contribute to the amount of crime that occurs from one place to another. As shown in statistical tables in subsequent sections of this publication, the crime experience in large cities is much greater due to many other complex factors and not simply numerical differences in population.

Crime index classification	Crimes per 100,000 inhabitants		
	Rate 1962	1962 percent change	
		Over 1961	Over 3-year average
Total.....	1, 102. 3	+5	+10
Murder.....	4. 5	-4	-6
Forcible rape.....	8. 8		
Robbery.....	51. 3	+2	+5
Aggravated assault.....	75. 1	+3	+4
Burglary.....	480. 4	+3	+9
Larceny \$50 and over.....	290. 5	+7	+13
Auto theft.....	191. 6	+7	+10

As shown above, the 1962 crime rate was 10 percent higher than the average rate for the period 1959 through 1961. The property crimes of burglary, larceny \$50 and over and auto theft are continuing to outstrip population growth at a rapid pace. While the murder rate was decreasing and forcible rape remained at the same level, aggravated assault was 4 percent above the 1959-1961 average. Generally, the highest crime rates are being reported by those states experiencing the fastest growing population.

The following charts graphically present the trend in serious crime from 1958 to 1962. The charts show the percent increase in the volume of crime, the trend in the crime rate and the actual increase in our national population. Separate charts are shown setting forth the 5-year experience for the crimes of violence and the property crimes. Arrest data beginning on page 91 provides information on other types of crimes as well as the seven offenses mentioned above.

Crime Calendar

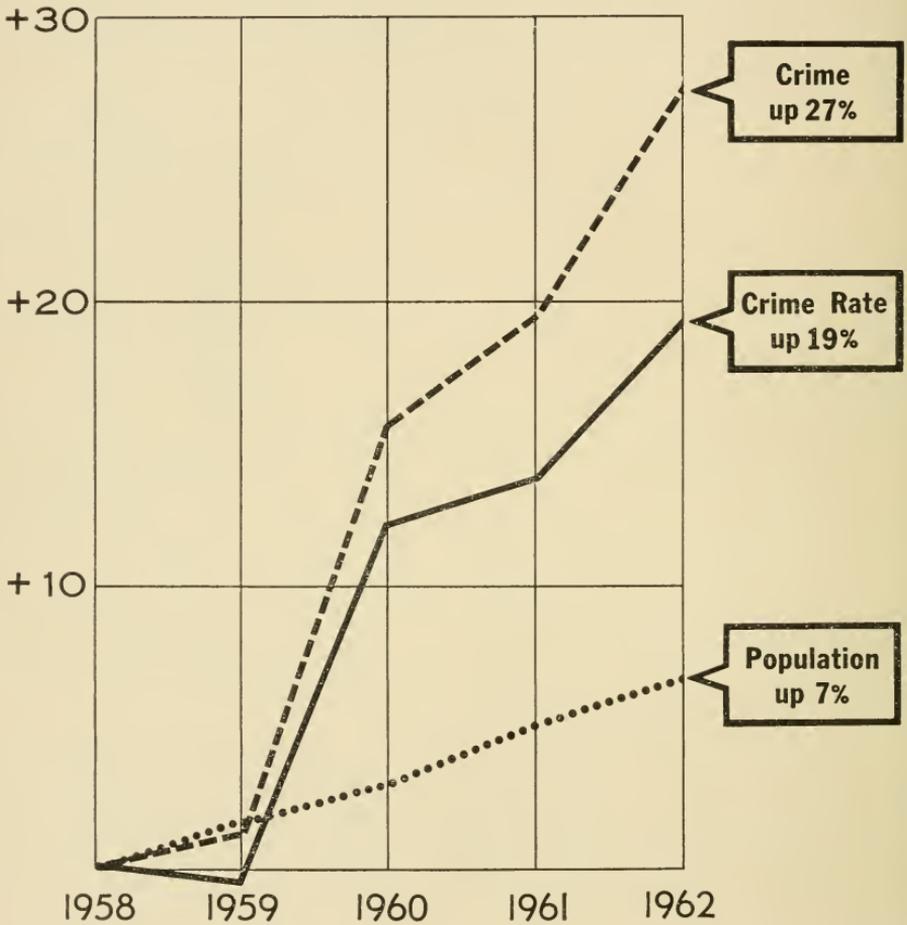

The frequency patterns of crime can within general limits be predicted on an annual basis. Monthly and seasonal variations for selected crimes (chart 4) varied little in 1962 from the average frequency experience for the prior 5 years.

Crimes against the person, consisting of aggravated assault, forcible rape, murder and nonnegligent manslaughter, are usually most

prevalent during the summer months and 1962 was not an exception to this. In 1961 murder for the first time in 6 years reached a peak in July and not December; however, murder on a monthly basis in 1962 restored the pattern peak to December. Manslaughter, consisting mainly of traffic deaths, continued to follow the 5-year average for such offenses, except for marked upswings in April and July, 1962.

Robbery and burglary were below the 5-year average for the first 5 months of 1962, but the trend reversed and both offenses reached peaks in December. Larceny-theft is the least influenced by seasonal trends. As was true last year, a high point in occurrence was reached in August. Thefts from automobiles, bicycle thefts and shoplifting contributed heavily to the high volume of larceny in August.

Auto theft in American cities reached its highest level in November, 1962, which is consistent with the 5-year experience. While the same pattern holds true in metropolitan areas surrounding large cities, auto theft in the rural areas began to increase in June and reached a peak during the summer months.

Chart 4 discloses the seasonal picture of crime for United States cities of all sizes. In 1962 the rural areas followed the same general seasonal crime pattern. Some exceptions were noted, however, as rural counties reported the peak in auto thefts was reached in September while the city total was highest in November. Rural counties reported that August was the high month for aggravated assault and the cities June. Manslaughter in the rural areas had its greatest frequency in the months of June, July and August with a similar upswing in November, while in cities November and December were high.

The highest daily volume of all offenses as a total occurred in August in both rural counties and cities. January was the low month for both rural areas and cities.

Crime Analyzed

During the past year detailed data on murder and nonnegligent manslaughter was collected from law enforcement agencies with respect to age, sex and race of the victim, the weapon used as well as the circumstances or motive surrounding each offense. Some of the results of this study appear in tables beginning on page 89. Briefly, murder and nonnegligent manslaughter as defined in this Program is the willful killing of one human being by another without due process of law. Certain justifiable homicides are excluded from the count. During 1962 there were an estimated 8,400 murders in the United States, a decrease of 2 percent from 1961.

Although for the most part murder occurs beyond the reach of police patrols, the police are successful in clearing this crime by the arrest and charge of the offender. In 1962 the police nationally cleared up 93 percent of these willful killings. On the other hand,

cases disposed of by the courts in 1962 indicate that about half resulted in either a reduction of the charge, acquittal, or dismissal. The motives or circumstances involved in these willful killings are not always available to the police. However, the following breakdowns on 7,258 murders in 1962 are set forth for a better understanding of the nature of this crime. Twenty-nine percent of the above total involved family situations. Forty-four percent were altercations outside the family. Thirteen percent were felony murders; that is, the victim was killed by a felon during the commission of another crime such as robbery, burglary, sex offense, etc., and 14 percent were situations in which the victim was found murdered, reason unknown or it was not stated. Of the family situations, 54 percent involved spouse killing spouse, 15 percent parent killing child, 6 percent child killing parent and the remainder involved other family relationships. The vast majority of altercations outside the family which resulted in killings revealed little motivation or appeared to be acts of emotional or insane rage. Nineteen percent of the murders outside of the family were identified as lovers' quarrels. Six percent were quarrels over money or property, 15 percent involved drinking situations and 3 percent revenge. Suicide followed murder in 241 instances.

On a nationwide basis, 54 percent of the willful killings resulted from use of a gun, and this percentage varies by size of the community and by geographic region as shown on chart 5. Other weapons used were cutting or stabbing instruments, 24 percent; personal weapons, strangulation and beatings, 9 percent; and blunt objects, 7 percent. Percentagewise, most victims were in their 30's, while arrests for murder were highest in the twenties. In 1962, 72 percent of the victims were male and 81 percent of the persons arrested for this offense were male. Over half the victims of these willful killings and over half the arrests for murder were persons of the Negro race. Additional information is available in statistical tables in subsequent sections of this publication.

In November, 1962, a 1-month nationwide survey was conducted on auto theft. Completed questionnaires were received from 2,263 cities with over 2,500 population and metropolitan county agencies. Final tabulations included 1,603 departments reporting at least 1 auto theft and a total population of 89,500,000. There were 23,197 auto thefts reported during the month, and 87 percent of the vehicles stolen were recovered during the month.

Nationally, law enforcement agencies on an annual basis recover slightly more than 90 percent of all autos stolen. In 1962 an estimated 356,100 cars were stolen with a property value of about \$308 million. The average value of automobiles stolen during 1962 was

FBI CHART

\$866. In 1962 auto thefts represented 17 percent of the total Crime Index offenses.

The survey showed that the incidence of theft was highest in residential areas. Over half of the motor vehicles stolen were taken from private residences, apartments, or streets in residential areas, and 21 percent were taken from streets in business or commercial areas. Fifteen percent were stolen from free parking areas such as shopping centers, and the remaining 11 percent were taken from used car lots, public garages and parking lots where a fee is charged (chart 6).

Over two-thirds of all the thefts occurred at night and 42 percent of the motor vehicles which were stolen had the key in the car or the ignition was unlocked. The incidence of daylight theft exceeded 40 percent in free parking areas, public garages and parking lots where fees are charged. Forty-seven percent of the motor vehicles taken from free parking areas and 55 percent of those taken from public garages or parking lots where a fee is charged had the key in the car or the ignition was unlocked. Fifty percent of the cars stolen from private residences or apartments were in the same condition (charts 7 and 8).

About 80 percent of the automobiles were stolen for transportation only or the purpose of the theft was unknown. Eight percent were taken for the purpose of stripping for parts. Five percent were used in another crime or escape and less than 1 percent was known to have been for the purpose of resale. The percentage breakdown for all types of auto theft is incomplete and in particular the resale thefts,

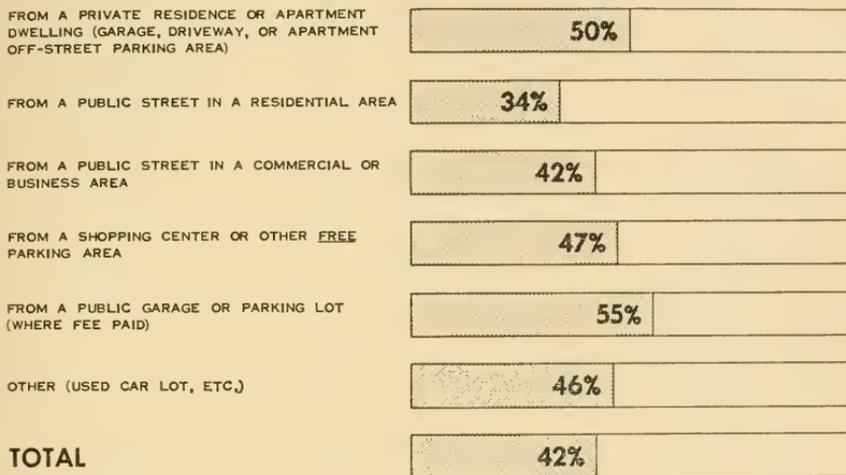

Chart 7

because 13 percent of all cars stolen during the month were not recovered during the survey. It should be noted that law enforcement cannot always distinguish between the so-called "joy-ride" offense and theft for profit or other purpose solely on the recovery of a stolen car.

Of the automobiles recovered during the survey, the local law enforcement agency in whose jurisdiction the cars were stolen recovered 80 percent, and 64 percent of these were within 48 hours. Twenty percent were recovered by other departments outside the jurisdiction where the original theft occurred. In some of the large metropolitan areas, over 50 percent of the stolen vehicles were recovered in another jurisdiction indicating the mobility factor involved in auto theft.

Sixty-four percent of the auto thefts were cleared by the arrest of young persons under the age of 18, and 36 percent were cleared by adult arrests. In the 2,972 clearances which involved juvenile offenders, 46 percent resulted from "on view" arrests. The remaining 54 percent were cleared by investigation arrests. Adult clearances totaled 1,684. Fifty-three percent of these were cleared by "on view" arrests and 47 percent were cleared after investigation. In those cases involving persons under 18, the juvenile was alone in nearly one-third of the thefts. In 58 percent of the violations two or more juveniles

KEY IN CAR OR
IGNITION UNLOCKED

NO KEY IN CAR AND
IGNITION LOCKED

FBI CHART

Chart 8

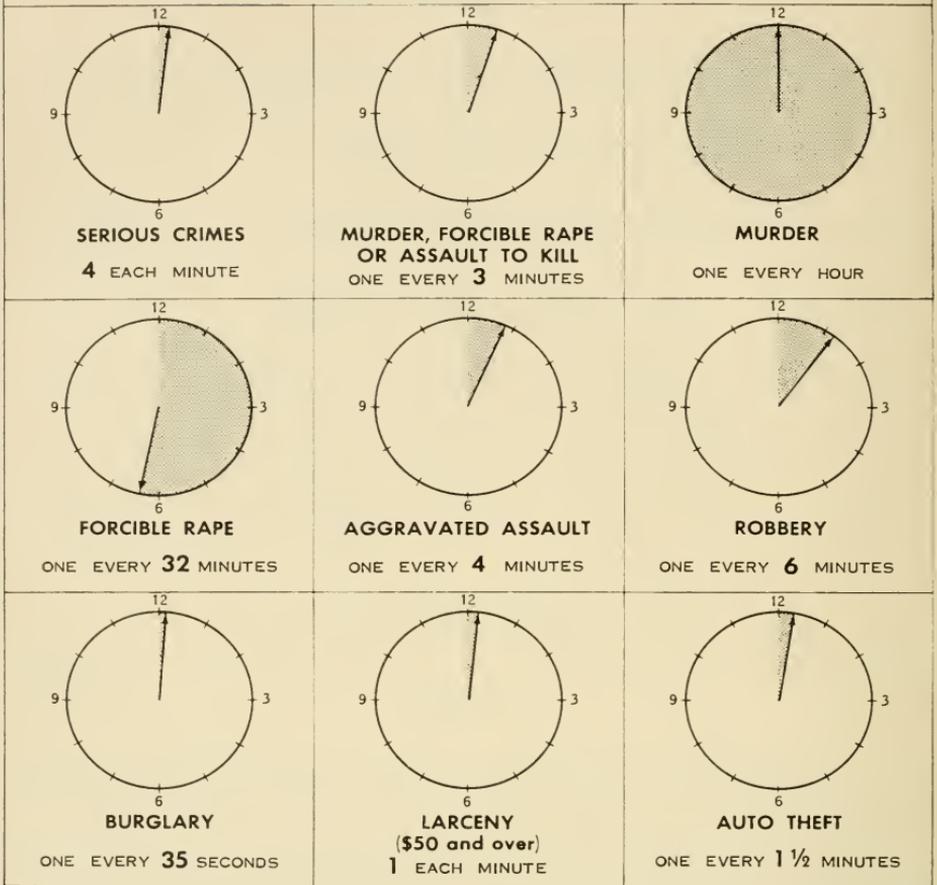

were involved, and in 10 percent of the offenses the juvenile was with an adult.

Fifty-nine percent of the juveniles arrested in November had prior police arrests, and 41 percent of these had a prior arrest for auto theft. Forty-one percent of the young offenders arrested had no known prior police arrest record. 1962 arrest data indicates that 87 percent of all arrests for auto thefts were persons under 25 years of age, and 62 percent were under 18.

The survey disclosed the public has a definite responsibility in reducing the opportunity for theft by removing the key from the car and locking the ignition. A positive attitude change in this connection can materially reduce transportation-type thefts by young offenders. Key ordinances have been adopted in many areas for the purpose of penalizing the driver for leaving keys in the car while it is unattended. The effectiveness of these ordinances requires a public awareness that the law exists and enforcement by the issuance of citations. Communities which have such ordinances had a lower auto theft rate when the ordinance was enforced. During the survey, 1,391 cities with populations of under 100,000 had an over-all monthly rate of 20

CRIME CLOCKS

1962

FBI CHART

Chart 9

auto thefts for each 100,000 inhabitants. The rate for cities having a key ordinance was 18, and the cities without such an ordinance had a theft rate of 21. In the cities where the ordinance was enforced by the issuance of citations the rate was 15, and where citations were not issued during the month the rate was 19.

Prevention is the best hope of reducing the number of auto thefts, particularly when we recognize the number of young people involved in the transportation-type thefts. Many of the auto thefts by young people are impulsive acts, dangerous to them as a beginning of a life of crime and frequently dangerous to the police and the law-abiding citizen.

A comprehensive article on auto theft based on the November, 1962, survey has been published in the July, 1963 issue of the FBI Law Enforcement Bulletin.

All larceny-theft increased 8 percent in 1962. The ratio of larceny under \$50 in value to larceny \$50 and over is about 3 to 1. It should be noted that many of the thefts, particularly those of small value, are not reported to the police.

Larceny by type as reported by city police is shown in table 13. Shoplifting increased 17 percent in 1962, followed by bicycle theft, 11 percent; thefts from autos, 10 percent; and purse-snatching, 8 percent. Larceny of auto accessories declined 7 percent from 1961 while pocket-picking, a low volume offense, increased 1 percent.

Burglaries make up 44 percent of the total offenses in the Crime Index and in 1962 there were an estimated 892,800 burglaries which was an increase of 5 percent over 1961. The total dollar loss for burglaries was \$171 million, which does not include the damage to or destruction of property which often results from this offense. Seventy-seven percent of the burglaries occurred at night. Nonresidence burglaries which include stores, offices, public buildings, warehouses and other business places accounted for 57 percent of this activity, and 92 percent of these occurred at night.

On the whole, forcible entry was used in about 70 percent of all burglaries, and in at least 21 percent of the cases some open means of entry existed.

Robbery rates indicate it is primarily a big city offense because of the frequency with which it occurs in these areas. There were an estimated 95,260 robberies in 1962 which was a 4 percent increase when compared with 1961. The cities with over 250,000 population had a robbery rate of 158 for each 100,000 inhabitants which was more than 6 times the rate for the metropolitan counties surrounding large cities and 15 times greater than in rural areas. Cities over 1 million population had a robbery rate over 4 times greater than all other cities combined, 9 times that of metropolitan counties and almost 20 times the incidence rate in rural areas.

Street robberies which made up about 50 percent of all robberies increased 6 percent in cities, while residence robberies which made up 8 percent of the total increased 13 percent. Bank robberies which were less than 1 percent of the over-all city robbery picture increased 26 percent.

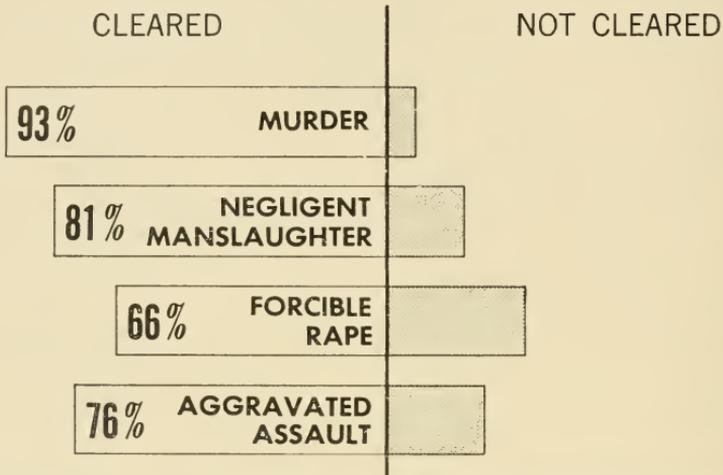

Crime and Police Effectiveness

The Crime Index indicates the scope of the problems facing police through offenses known data. One of the measurements of police effectiveness in meeting these problems is the number of crimes cleared by arrests of offenders. The prosecutive action which may or may not follow is not the direct responsibility of the police. During 1962, city police cleared up approximately one of every four

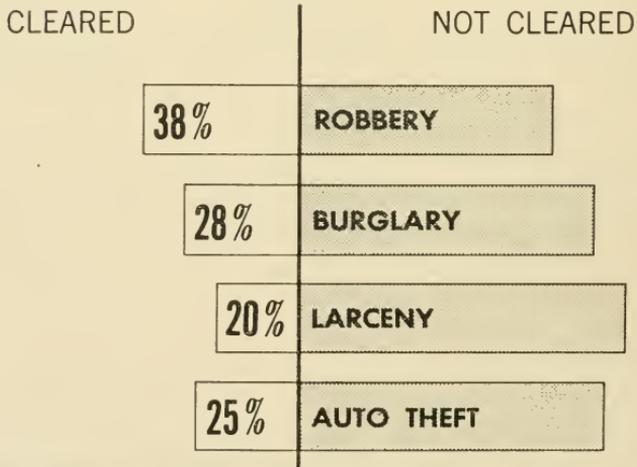

CRIMES CLEARED BY ARREST

1962

AGAINST THE PERSON

AGAINST PROPERTY

FBI CHART

Chart 10

crimes of murder, manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny and auto theft.

Clearances dropped off slightly in 1962 to 25.7 percent compared with 26.7 percent in 1961, but the percentage of cases cleared involving offenses against the person continued at a high level. Due to sheer volume, the relatively minor nature of some of the offenses and the lack of witnesses, clearances in crimes against property were considerably lower (chart 10). Tables 8 and 9 disclose the decline in clearances was distributed uniformly throughout all geographic divisions with the exception of the Pacific states, which registered a 4.6 percent increase. When reviewed by population group, slight decreases in clearances were noted for all groups except cities with fewer than 25,000 inhabitants and metropolitan counties. A greater awareness on the part of citizens of their obligation to support the police effort would inevitably produce a rise in the clearance rate. In order to function effectively, police must depend to a large extent on a cooperative citizenry to supply vital information.

Persons Arrested

In this Program, arrests are collected from law enforcement agencies on the basis of age, sex, race, and specific charge excluding traffic offenses. Arrests are primarily a measure of police activity and although widely influenced by local practice, policy and law, they do furnish general information on the characteristics of offenders.

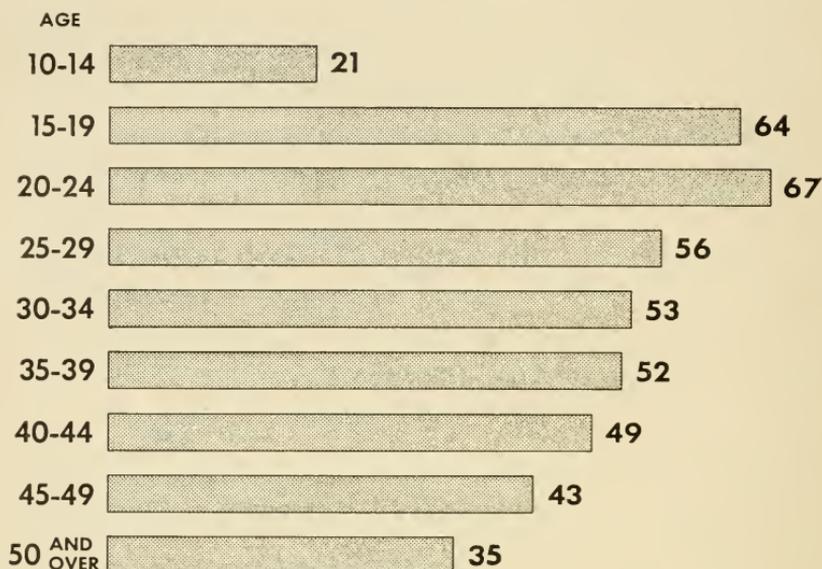

During 1962, total arrests for all ages and all criminal acts remained at about the 1961 level. There were 36 arrests for each 1,000 Americans. Arrest activity, however, in cities over 100,000 population was 41 percent above the national arrest rate. The ratio of male to female arrests is about 8 to 1, but female arrests continue to increase at a faster pace.

Chart 11 discloses an estimated arrest rate by age group for all criminal acts. It is based on arrest data submitted by police agencies representing 67 percent of our national population. Population by age group, 1962 estimate, was obtained from the Bureau of the Census. Chart 11 indicates the involvement of certain age groups in the wide range of arrests including drunkenness, vagrancy, simple assault, as well as the more serious criminal acts. While this chart shows a general slowing down in criminal activity as the groups progress in age, chart 12 indicates the extent to which young age groups heavily influenced arrests for the crimes of murder, forcible rape, robbery, aggravated assault, burglary, larceny and auto theft. At the same time the charts demonstrate that a relatively small percentage of our young people or, for that matter, all age groups become involved in criminal activity as known through police arrests. The 20-24 year age group ranks highest for arrests for all criminal

Chart 11

acts with a rate of 67 arrests for each 1,000 of that age; however, the 15-19 year old age group nearly doubled the rate of the older age group for the selective crimes. (Chart 12).

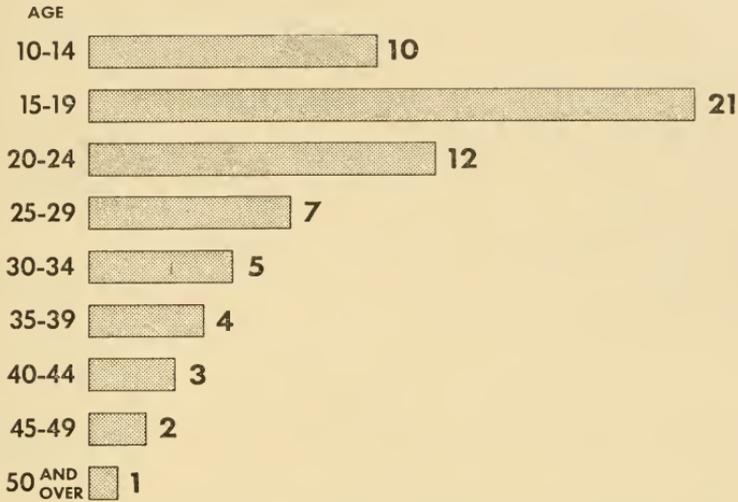

Arrests for young persons under 18 years of age have increased more than three times as fast as their population growth in the last 6 years. For the country as a whole in 1962, persons under 18 years of age comprised 62 percent of the arrests for auto theft, 51 for larceny, 49 for burglary, 25 for robbery, 19 for forcible rape, 13 for aggravated assault and 8 for murder and nonnegligent manslaughter. For the above crimes as a group, juveniles were represented in 45 percent of the total arrests.

During the calendar year 1962, arrests of persons under 18 years of age rose 9 percent over 1961. For all criminal acts they made up 18 percent of the arrests in metropolitan or suburban counties, 16 percent of the arrests in American cities and 13 percent in the rural areas. The upward trend in arrests for young people continued in both property offenses as well as crimes against the person. Again, arrests

of young girls, particularly for crimes against property, reveal sharper increases than those recorded by young males. Further details on arrest data are shown in statistical tables beginning on page 91.

Persons Charged

Not all persons arrested by police are later formally charged; i.e., turned over to the courts for prosecution. There are a number of reasons for this; namely, the victim refuses to cooperate in the prosecution, police determine the person arrested did not commit the alleged offense, police release arrested person with a warning, police are unable to establish sufficient evidence for a formal charge, etc. Tabulations beginning on page 87 indicate court dispositions of persons formally charged by police, as well as the percentage of young persons (local age limit) referred to juvenile court jurisdiction for specific criminal acts. It should be kept in mind in using these statistics that police handling of juvenile offenders differs widely.

Remembering the many variables in local law and prosecutive policy, the following discussion is based on tables 10 and 33, which reflect a summary of the general nationwide experience. Although

the police clear up, by arrest and charge of the offender, a greater percentage of crimes against the person than the property crimes which occur in far greater volume, the prosecutive pattern differs. Murder, aggravated assault and forcible rape are less likely to result in a formal charge after arrest and show a greater percentage of reduction in charges as well as acquittals and dismissals than the property crimes of burglary, robbery, larceny and auto theft. Table 10 shows, for instance, that persons were found guilty of a lesser offense and acquitted or dismissed in 52 percent of the willful killings, in 55 percent of the forcible rapes and in 62 percent of the aggravated assaults. Some reasons for this are pleas of self-defense in murder and nonnegligent manslaughter, and refusal of the victim to cooperate in prosecution in cases of forcible rape and aggravated assault.

During 1962, convictions were obtained in 71 percent of the cases involving gambling charges, 69 percent in narcotics violations and 91 percent of the driving while intoxicated cases. On the other hand, persons convicted of a lesser charge, acquitted or dismissed, ran high in forgery and counterfeiting with 36 percent. Other assault cases parallel the experience of the more serious crime of aggravated assault by showing acquittals or dismissals in 35 percent of the cases, the major factor again being a lack of prosecutive witnesses. Offenders were found guilty as charged 76 percent of the time on prostitution and commercialized vice, but in only 57 percent of the other sex offenses, including statutory rape.

As indicated by police arrests, referrals of young persons to juvenile court by police are primarily for the property crimes of auto theft, burglary, larceny, robbery and possession of stolen property. On the other hand, police handled 47 percent of the juvenile arrests without referral to juvenile court (table 33). These are mostly for the less serious offenses which police agencies take up with parents either orally or by written citation and the juvenile is released with a warning. The number of juveniles handled in this manner varies with the size of the community as well as geographically. On a national basis, 47 percent of the juveniles taken into custody by the police are referred to the juvenile court.

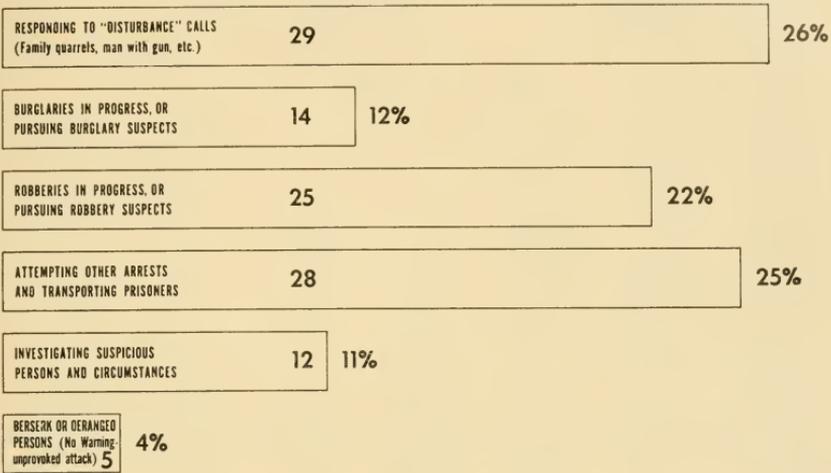

Police Employee Data

Tables presented later in this publication show the average police strength in cities by geographic division and population group. These averages must not be construed as recommended or desirable police strength since many factors will affect police effectiveness from place to place with the number of police employees being only one of these. Rate ranges are likewise provided for further comparative purposes. Tables relating to police killed in the line of duty, ratios of civilian

POLICE KILLED BY FELONS

BY TYPE OF POLICE ACTIVITY

1960-1962

113 POLICE KILLED
INCLUDES CITY, COUNTY, AND STATE POLICE

FBI CHART

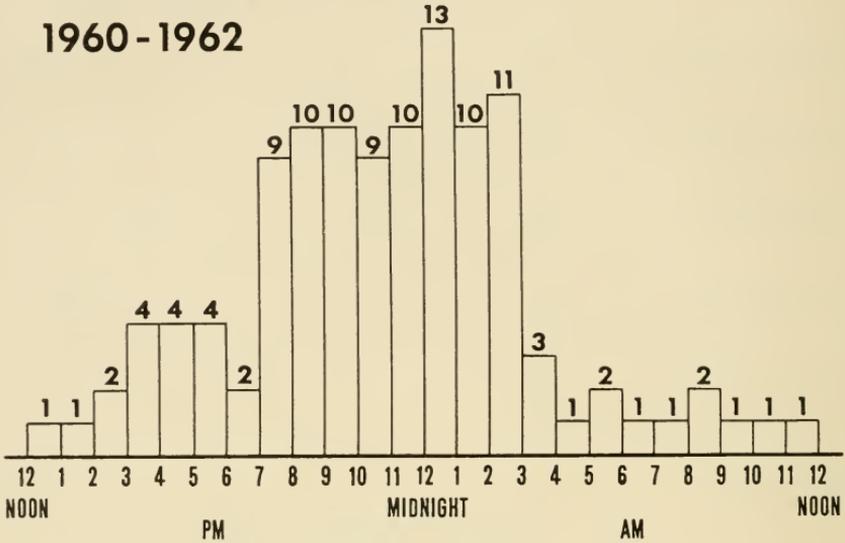

Chart 13

employees to total police department employees and police assaulted rates are also presented herein.

Data collected in 1962 disclosed the number of police employees per 1,000 population remained at 1.9, the same national average rate as 1961. During the past 5 years, this ratio of police to population has remained virtually unchanged and thus has barely kept pace with population growth. On the other hand, the number of serious crimes known to police has increased four times faster than the growth in population. The police, then, have been handling this increased workload without a corresponding increase in personnel. The rather extreme variances in police employee rates among cities in the same population group suggest the need for constant evaluation of local police requirements.

Calendar year 1962 again witnessed a high toll in police lives lost in the line of duty. During this year, local, county and state police reported the deaths of 78 law enforcement officers under these circumstances. The total of 78 deaths for 1962 resulted from 48 incidents wherein men were murdered by criminal action, while 30 officers lost their lives in traffic accidents. Statistics for the three years, 1960 through 1962, disclose a total of 113 law enforcement officers

POLICE KILLED BY FELONS BY HOUR OF DAY 1960-1962

FBI CHART

Chart 14

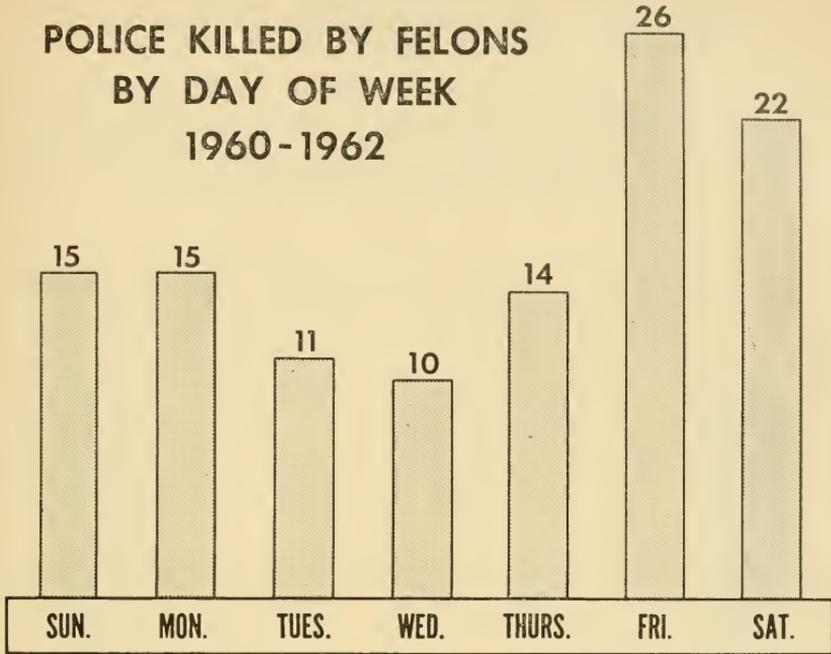

killed by felons during this period. Chart 13 portrays the types of police activity in which these officers were engaged at the time of the fatal incidents. It will be noted that answering disturbance calls continues to be one of the most dangerous assignments. Twenty-six percent of the deceased officers were responding to such complaints when killed. Attempting to make arrests and transporting prisoners accounted for another 25 percent of the fatalities.

This year charts are presented to show police killings by time of day and day of week of the occurrence. Charts 14 and 15 pinpoint the periods of highest incidence and exposure.

An analysis of the types of weapons used to kill the 113 law enforcement officers over the 3-year period reveals that 109 officers were shot to death. In 86 of these incidents a revolver or automatic pistol was used. Shotguns and rifles were the instruments of death on 23 occasions. Knives were used as murder weapons in two of the cases.

In total, 142 individuals were involved in the murders of police officers during the years 1960-1962. A review of the criminal histories of these persons disclosed 80 percent had records of prior arrests, and 75 percent had been convicted on one or more occasions. Leniency in the form of probation or parole had been previously granted to 56

**POLICE KILLED BY FELONS
BY DAY OF WEEK
1960-1962**

FBI CHART

Chart 15

percent of the offenders, and 37 percent were on parole or probation at the time they murdered a law enforcement officer.

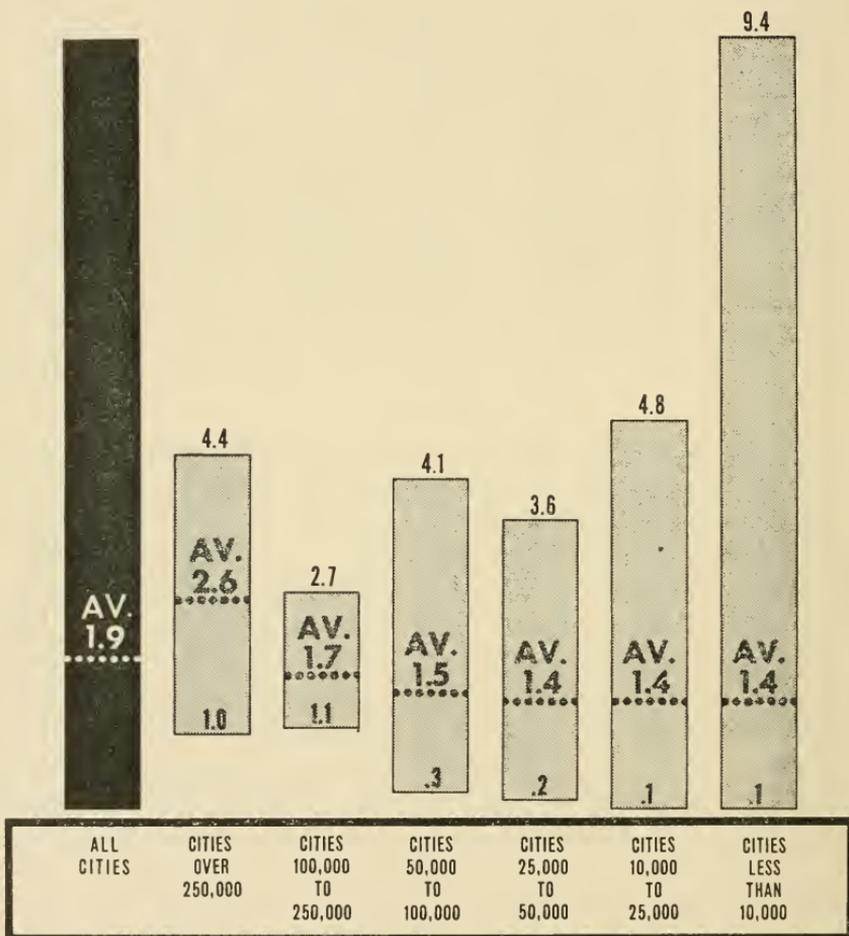

A total of 118 individuals were arrested in connection with the killing of the 113 police officers. In addition to those arrested, 19 of the attackers were killed by police while resisting arrest at the time of, or shortly after the attack, and 5 committed suicide after firing the fatal shot. Although not fully reported at this time, available disposition data discloses that 21 of the offenders received the death penalty, 41 were sentenced to life imprisonment and 24 received prison terms ranging from 5 to 125 years. Further, one criminal received a sentence of 10 years probation, 3 were found not guilty by juries, and a grand jury failed to return an indictment in one case. Four defendants were committed to mental hospitals and one defendant died of natural causes prior to trial.

Table 37 shows an analysis of police assaulted by geographic division and population group. In 1962, about 1 of every 10 police officers was the victim of an assault during the course of duty. The high incidence areas for assaults continued to be in the South Atlantic division and in the large cities with over 250,000 population. Cities in the New England division and cities with populations of 10,000 to 25,000 experienced the lowest rates of assaults on police.

Law Enforcement Code of Ethics

As a Law Enforcement Officer, *my fundamental duty is to serve mankind; to safeguard lives and property; to protect the innocent against deception, the weak against oppression or intimidation, and the peaceful against violence or disorder; and to respect the Constitutional rights of all men to liberty, equality and justice.*

I will *keep my private life unsullied as an example to all; maintain courageous calm in the face of danger, scorn, or ridicule; develop self-restraint; and be constantly mindful of the welfare of others. Honest in thought and deed in both my personal and official life, I will be exemplary in obeying the laws of the land and the regulations of my department. Whatever I see or hear of a confidential nature or that is confided to me in my official capacity will be kept ever secret unless revelation is necessary in the performance of my duty.*

I will *never act officiously or permit personal feelings, prejudices, animosities or friendships to influence my decisions. With no compromise for crime and with relentless prosecution of criminals, I will enforce the law courteously and appropriately without fear or favor, malice or ill will, never employing unnecessary force or violence and never accepting gratuities.*

I recognize *the badge of my office as a symbol of public faith, and I accept it as a public trust to be held so long as I am true to the ethics of the police service. I will constantly strive to achieve these objectives and ideals, dedicating myself before God to my chosen profession . . . law enforcement.*

Introduction

Background

The Uniform Crime Reporting Program is the outgrowth of a need for a national and uniform compilation of police statistics. This need was expressed by law enforcement executives many years ago. In 1930, crime reports were solicited from police departments throughout the Nation based on uniform classifications and procedures developed by the Committee on Uniform Crime Records of the International Association of Chiefs of Police (IACP). In that year the Federal Bureau of Investigation (FBI), on request of the above organization, assumed the role as the national clearinghouse.

The Committee on Uniform Crime Records, IACP, continues to serve in an advisory capacity to the FBI in the operation of this Program. The assistance of the Committee is especially valuable in actively promoting the quality of the reports supplied by the cooperating law enforcement agencies. In this connection, the Field Service Division of the IACP is also playing an active and effective part in quality control through surveys of police record and crime reporting systems. Dr. Peter P. Lejins, Professor, Department of Sociology, University of Maryland, continues as a consultant to the FBI in the conduct of this Program.

A special meeting of the Committee on Uniform Crime Records, called at the suggestion of the FBI, was held in Washington, D.C., in April, 1963, at which time substantial revisions were made in the Program. Primarily these grew out of Uniform Crime Reporting special surveys in the last few years, but the Committee also considered a wide range of suggestions from many sources. These changes will not alter the basic data being collected, but are designed to better categorize certain offense classifications. The objectives are to obtain increased uniformity in crime reporting and to provide additional useful information for police executives as well as others utilizing Uniform Crime Reports. These changes will be placed in effect commencing in January, 1964.

The resolution adopted at the International Association of Chiefs of Police Convention in October, 1961, which called for the formation of Uniform Crime Reporting Committees within state law enforcement associations, has resulted in the establishment of 63 committees in 47 states. These committees are active in promoting greater

interest in Uniform Crime Reporting, in fostering more widespread use of uniform crime statistics, in encouraging new contributors, and in lending assistance to current contributors when the need arises.

Objectives

The primary objective is to produce a reliable program of nationwide criminal statistics for administrative and operational use of law enforcement agencies, and in so doing provide meaningful data for other professionals with related interests in the crime problem, for scholars and also to inform the average citizen of general crime conditions.

Specifically, the means utilized to attain these goals are: (1) Through a Crime Index consisting of seven selected offenses, an attempt is made to measure the extent, fluctuation and distribution of serious crime in the United States. This count is based on these seven offenses being reported to the police or coming directly to their attention. (2) The total volume of all types of criminal offenses is compiled as they become known by police arrests. (3) Since the above are also measures of law enforcement activity, related data is collected to demonstrate effectiveness of enforcement activities, available police strength and significant factors involved in crime.

Reporting Procedure

Under this national voluntary system each contributing law enforcement agency is wholly responsible for compiling its own crime reports for submission to the FBI. Each contributor is supplied with the Uniform Crime Reporting Handbook which outlines in detail procedures for scoring and classifying offenses. The Handbook illustrates and discusses the monthly and annual reporting forms, as well as the numerous tally sheets made available to facilitate the periodic tabulation of the desired data.

Recognizing that a sound records system is necessary if crime reporting is to meet desirable standards, the FBI furnishes a Manual of Police Records to law enforcement agencies upon request. Special Agents of the FBI are widely utilized to encourage new contributors and to assist them by explaining the procedures and definitions necessary under this uniform system.

On a monthly basis, city police, sheriffs and state police report the number of offenses that become known to them in the following crime categories: criminal homicide, forcible rape, robbery, aggravated assault, burglary, larceny and auto theft. This count is taken from a record of all complaints of crimes received by the police from victims or other sources or discovered by the police in their own operations. Complaints determined by police investigation to be unfounded are

eliminated from this count. The number of "offenses known" in these crime categories is reported to the FBI without regard to whether anyone is arrested, stolen property is recovered, local prosecutive policy, or any other consideration. Police agencies report on a monthly basis the number of these crimes which they clear by arrest and certain other analytical data pertaining to specific crime categories.

In annual reports, "offenses known" data and clearances by arrest are summarized by the contributors. Annual forms provide a report of persons arrested for all criminal offenses with respect to age, sex and race of the offender as well as an accounting of the number of persons formally charged and their disposition. Police employee data is collected annually, including the number of police killed and assaulted.

Reporting Area

During the calendar year 1962, crime reports were received from law enforcement agencies representing 98 percent of the total United States population living in standard metropolitan statistical areas, 94 percent of the population in other cities, and 80 percent of the rural population. The combined coverage accounts for 94 percent of the national population.

Presentation of crime data by areas as used in this publication follows as closely as practical the definitions used by Bureaus of the Budget and Census; namely, standard metropolitan statistical areas, other cities and rural areas. *Standard metropolitan statistical areas* are generally made up of an entire county or counties having at least one core city of 50,000 or more inhabitants, with the whole meeting the requirements of certain metropolitan characteristics. In New England, "town" instead of "county" is used to describe standard metropolitan statistical areas. These towns do not coincide generally with established crime reporting units; therefore, metropolitan state economic areas in New England are used in this area tabulation since they encompass an entire county or counties. Standard metropolitan statistical areas make up an estimated 64 percent of the total United States population.

Other cities are urban places outside standard metropolitan statistical areas. Most of these places of 2,500 or more inhabitants are incorporated and comprise 13 percent of the 1962 estimated population. *Rural areas* are made up of the unincorporated portion of counties outside of urban places and standard metropolitan statistical areas and represent 23 percent of our national population. Throughout this Program, sheriffs, county police and many state police report on crimes committed within the limits of the county but outside cities, while police report on crimes committed within the city limits (urban places).

Verification Processes

Uniformity of crime data collected under this Program is of primary concern to the FBI as the national clearinghouse. With the receipt of reports covering approximately 8,000 jurisdictions, prepared on a voluntary basis, the problems of attaining uniformity are readily apparent. Issuance of instructions does not complete the role of the FBI. On the contrary, it is standard operating procedure to examine each incoming report not only for arithmetical accuracy but also, and possibly of even more importance, for reasonableness as a possible indication of errors.

Variations in the level and ratios among the crime classes established by previous reports of each agency are used as a measure of possible or probable incompleteness or changes in reporting policy. Necessary arithmetical adjustments or unusual variations are brought to the attention of the submitting agency by correspondence. During 1962, over 15,000 letters were addressed to contributors primarily as a result of verification and evaluation processes. Correspondence with contributors is the principal tool for supervision of quality. Not only are the individual reports studied, but also periodic trends for individual reporting units are prepared, as are crime rates in descending order for all units grouped for general comparability to assist in detecting variations and fluctuations possibly due to some reason other than chance. For the most part, the problem is one of keeping the contributors informed of the type information necessary to the success of this Program.

The elimination of duplication of crime reporting by the various agencies is given constant attention. In addition to detailed instructions as to the limits of reporting jurisdictions between sheriffs and police in urban places, lists of urban places by county are furnished to sheriffs, county police, and in some instances state police organizations.

Uniform Crime Reporting has been taught to all law enforcement officers attending the FBI National Academy. The Academy was established in 1935, and there are 2,768 graduates who are still in law enforcement, almost 29 percent of whom are the executive heads of law enforcement agencies. The FBI also presents this subject to regional police schools throughout the country.

Contacts by Special Agents of the FBI are utilized to enlist the cooperation of new contributors and to explain the purpose of this Program and the methods of assembling information for reporting. When correspondence, including specially designed questionnaires, fails, Special Agents may be directed to visit the contributor to affirmatively resolve the misunderstanding. During calendar year 1962, Special Agents of the FBI continued to be used for contacts with contributors on Uniform Crime Reporting matters.

Variations from the desired reporting standards which cannot be resolved by the steps indicated above are brought to the attention of the Committee on Uniform Crime Records of the IACP. The Committee may designate a representative to make a personal visit to the local department to assist in the needed revision of records and reporting methods.

It is clear, of course, that regardless of the extent of the statistical verification processes used by the FBI, the accuracy of the data assembled under this Program depends upon the degree of sincere effort exerted by each contributor to meet the necessary standards of reporting, and, for this reason, the FBI is not in a position to vouch for the validity of the reports received.

The Crime Totals

Communities not represented by crime reports are relatively few, as discussed previously and as shown by an examination of the tables which follow presenting 1962 crime totals for the Index of Crime classifications. The FBI conducts a continuing program to further reduce the unreported areas.

Within each of the three areas—standard metropolitan statistical, other urban, and rural—it is assumed that the unreported portion had the same proportionate crime experience as that for which reports were received. In lieu of figures for the entire year from those agencies representing at least 25 percent of any one of the individual units of the three areas indicated above for which estimates were prepared, reports for as many as 9 months were accepted as sufficiently representative on which to base estimates for the year. Estimates for unreported areas are based on the reported crime experience of similar areas within each state. Certain refinements are made of this basic estimating procedure as the need arises.

Crime Trends

Crime data for trends are homogeneous to the extent that figures from identical reporting units are used for each of the periods tabulated. Exclusions are made when figures from a reporting unit are obviously inaccurate for any period or when it is ascertained that unusual fluctuations are due to such variables as improved record procedures and not to chance.

As a matter of standard procedure, crime trends for individual places are analyzed by the FBI five times a year. Any significant increase or decrease is made the subject of a special inquiry with the contributing agency. Whenever it is found that crime reporting procedures are responsible for the difference in level of crime, the figures for specific crime categories or totals are excluded from the trend tabulations. On the other hand, crime rate tables by state and standard

metropolitan statistical area contain the most reliable reports available for the current year, and care should be exercised in any direct comparisons with prior issues. Changes in crime level may have been due in part to improved reporting or records procedures rather than to chance.

Population Data

In computing crime rates by state, geographic division, and the Nation as a whole, population estimates released by the Bureau of the Census on November 26, 1962, were used. Population estimates for individual cities and counties were prepared by using Special Census Reports, state sources and estimates, commercial sources, and extrapolation where no other estimate was available. The estimated United States population increase in 1962 was 1.5 percent over 1961, according to figures published by the Bureau of the Census.

Classification of Offenses

A stumbling block to a uniform national crime reporting system in the United States results from variations in definitions of criminal violations among the states. This obstacle, insofar as uniformity of definitions is concerned, was removed by the adoption of an arbitrary set of crime classifications. To some extent the title of each classification connotes in a general way its content. However, in reading the explanation of each category it is very important to keep in mind that because of the differences among the state codes there is no possibility in a system such as this to distinguish between crimes by designations such as "felony" and "misdemeanor."

A continuing program is carried out to furnish contributors with timely supplemental instructions as the need arises in certain classifications. These are aimed at the clarification of any misunderstandings which may arise and the redirection of attention to the proper application of classification procedures under this system.

Brief definitions of crime classifications utilized in this Program are listed below:

1. **Criminal homicide.**—(a) Murder and nonnegligent manslaughter: all willful felonious homicides as distinguished from deaths caused by negligence. Excludes attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides. Justifiable homicides are limited to: (1) the killing of a person by a peace officer in line of duty; (2) the killing of a person in the act of committing a felony by a private citizen. (b) Manslaughter by negligence: any death which the police investigation establishes was primarily attributable to gross negligence of some individual other than the victim.

2. **Forcible rape.**—Rape by force, assault to rape and attempted

rape. Excludes statutory offenses (no force used—victim under age of consent).

3. **Robbery.**—Stealing or taking anything of value from the person by force or violence or by putting in fear, such as strong-arm robbery, stickups, armed robbery, assault to rob, and attempt to rob.

4. **Aggravated assault.**—Assault with intent to kill or for the purpose of inflicting severe bodily injury by shooting, cutting, stabbing, maiming, poisoning, scalding, or by the use of acids, explosives, or other means. Excludes simple assault, assault and battery, fighting, etc.

5. **Burglary—breaking or entering.**—Burglary, housebreaking, safecracking, or any unlawful entry to commit a felony or a theft, even though no force was used to gain entrance and attempts. Burglary followed by larceny is not counted again as larceny.

6. **Larceny—theft** (except auto theft)—(a) Fifty dollars and over in value; (b) under \$50 in value. Thefts of bicycles, automobile accessories, shoplifting, pocket-picking, or any stealing of property or article of value which is not taken by force and violence or by fraud. Excludes embezzlement, “con” games, forgery, worthless checks, etc.

7. **Auto theft.**—Stealing or driving away and abandoning a motor vehicle. Excludes taking for temporary use when actually returned by the taker or unauthorized use by those having lawful access to the vehicle.

8. **Other assaults.**—Assaults and attempted assaults which are not of an aggravated nature.

9. **Forgery and counterfeiting.**—Making, altering, uttering or possessing, with intent to defraud, anything false which is made to appear true. Includes attempts.

10. **Embezzlement and fraud.**—Fraudulent conversion, embezzlement, and obtaining money or property by false pretenses.

11. **Stolen property; buying, receiving, possessing.**—Buying, receiving, and possessing stolen property and attempts.

12. **Weapons; carrying, possessing, etc.**—All violations of regulations or statutes controlling the carrying, using, possessing, furnishing, and manufacturing of deadly weapons or silencers and attempts.

13. **Prostitution and commercialized vice.**—Sex offenses of a commercialized nature and attempts, such as prostitution, keeping bawdy house, procuring, transporting, or detaining women for immoral purposes.

14. **Sex offenses** (except forcible rape, prostitution, and commercialized vice).—Statutory rape, offenses against chastity, common decency, morals, and the like. Includes attempts.

15. **Offenses against the family and children.**—Nonsupport, neglect, desertion, or abuse of family and children.

16. **Narcotic drug laws.**—Offenses relating to narcotic drugs, such as unlawful possession, sale, or use. Excludes Federal offenses.

17. **Liquor laws.**—State or local liquor law violations except “drunkenness” (class 18) and “driving while intoxicated” (class 22). Excludes Federal violations.

18. **Drunkenness.**—Drunkenness or intoxication.

19. **Disorderly conduct.**—Breach of the peace.

20. **Vagrancy.**—Vagabondage, begging, loitering, etc.

21. **Gambling.**—Promoting, permitting, or engaging in gambling.

22. **Driving while intoxicated.**—Driving or operating any motor vehicle while drunk or under the influence of liquor or narcotics.

23. **Violation of road and driving laws.**—Improper handling of a moving motor vehicle.

24. **Parking violations.**—Improper or overtime parking.

25. **Other violations of traffic and motor vehicle laws.**—Traffic and motor vehicle violations other than classes 22–24.

26. **All other offenses.**—All violations of state or local laws except classes 1–25.

27. **Suspicion.**—Arrests for no specific offense and released without formal charges being placed.

The Index of Crime, 1962

In this section, tabulations are shown to indicate the probable extent, fluctuation and distribution of crime for the United States as a whole, geographic divisions, individual states and standard metropolitan statistical areas. The measure used is a Crime Index consisting of seven important offenses which are counted as they become known to the law enforcement agencies. Crime classifications used in the index are: murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary—breaking or entering, larceny \$50 and over, and auto theft.

The total number of criminal acts that occur is unknown, but those that are reported to the police provide the first means of a count. Not all crimes come readily to the attention of the police; not all crimes are of sufficient importance to be significant in an index; and not all important crimes occur with enough regularity to be meaningful in an index. With these considerations in mind, the above crimes were selected as a group to furnish an abbreviated and convenient measure of the crime problem.

Table 1.—Index of Crime, United States, 1962

Area	Population	Total offenses	Murder and non-negligent manslaughter	Forcible rape	Robbery	Aggravated assault	Burglary	Larceny \$50 and over	Auto theft

For standard metropolitan statistical areas in this table the percentage actually reporting may not coincide with the ratio between reported and estimated crime totals since these data represent the sum of such calculations for individual areas varying in size, portions reporting, and crime rates.
 Population by area for each state is 1962 estimate; total population for each state is Bureau of the Census provisional estimate as of July 1, 1962, and subject to change. All rates were calculated on the estimated population before rounding.

General United States Crime Statistics

The data presented in this section are primarily of value to the law enforcement executive and others for the purpose of comparing the crime experience of a community with the averages reported nationally by communities of similar size. Crime trends and rates are tabulated by grouping places according to population size. Police performance in clearing crimes by arrest are presented by population group and geographic division.

National city averages are also shown indicating the type and value of the property stolen, by offense and type, and value recovered by police investigation. Robbery, burglary, and larceny-theft are examined by type, as well as where and when they occurred.

City, metropolitan, and rural county arrest rates are shown for all criminal offenses. Arrest rates by population group are also listed for specific offenses. This is another step in building totals for crime categories other than those in the Crime Index and in presenting crimes known to the police through arrests.

It is important to remember in studying averages that about half the units used must be above and about half below. National averages can provide the police administrator with valuable guidance in analyzing the local crime count, as well as the performance of his force in combating crime. The analysis, however, does not end with such a comparison, for it is only through an appraisal of local conditions that a clear picture of the community crime problem or the effectiveness of the police force is possible.

Table 5.—Crime Trends, Offenses Known to the Police, 1961-62, by Population Groups

[1962 estimated population]

Population group	Total	Criminal homicide		Forecible rape	Robbery	Aggra- vated assault	Burglary— breaking or entering	Larceny—theft		Auto theft
		Murder and non- negligent man- slaughter	Man- slaughter by negligence					\$50 and over	Under \$50	
TOTAL CITIES: 3,842 cities; total population 101,915,000:										
1961.....	2,307,996	4,483	2,833	8,580	58,123	81,257	550,416	344,725	1,025,687	231,512

Larceny— <i>theft</i> : \$50 and over.....	287,758	351,323	+22.1
Under \$50.....	871,754	1,018,156	+16.8
Auto theft.....	203,907	239,510	+17.5

¹ Beginning in 1958 the rape category was limited to forcible offenses. Prior to 1958 statutory cases were also included. The forcible rapes used to construct the annual average for 1956-57 were estimates based on special offense analyses furnished by over 400 selected cities (total population over 50 million) which showed the proportion of reported rapes classified as forcible each year.

Table 8.—Offenses Known and Cleared by Arrest, 1962, by Population Groups, Number per 100 Known Offenses

[1962 estimated population]

Population group	Total	Criminal homicide		Forcible rape	Robbery	Aggravated assault	Burglary—breaking or entering	Larceny— <i>theft</i>	Auto theft
		Murder and nonnegligent manslaughter	Manslaughter by negligence

Arrest Data

Annual reports prepared by contributing law enforcement agencies giving certain personal characteristics of persons arrested are presented in the following tabulations. Arrest rates for all criminal acts are shown by population group as reported by city and county enforcement agencies representing 67 percent of the United States population. Trend information is shown for both city and rural areas, as well as tabulations by age, sex and race.

In interpreting arrest information, it should be kept in mind that the same person may be arrested several times in a year for the same type or different offenses. Each arrest is counted. The arrest of one person may clear several crimes and several persons may be arrested for one crime.

Police arrest practices vary widely, particularly with respect to juveniles. For the purpose of this Program, law enforcement agencies score an arrest when a person is taken into custody for committing a specific offense. A juvenile is counted as arrested when he or she has committed a crime, and the circumstances are such that if the individual were an adult an arrest would have been made.

Although arrest information is primarily a measure of law enforcement activity, it provides useful information on characteristics of persons arrested for criminal acts. It is also a gauge of criminality when used within its limitations, as must be done with all forms of criminal statistics, including court and penal.

¹ Traffic and neglect cases not included.

² Because of rounding, the percentages may not add to precisely 100.0 percent.

³ Counties in standard metropolitan statistical areas as defined by the Bureau of the Budget.

Police Employee Data

Tables in the section which follows relate to police personnel. Figures which are presented in the tables on full-time police officers and civilian employees are based on national averages. These figures are not to be construed as representing recommended or desirable police strength. Each community must evaluate the numerous factors which affect its police requirements before arriving at a conclusion as to local police needs. Rate ranges are provided as supplemental data for those interested in using these figures to make limited comparisons.

Police killed and assaulted tables are prepared from figures submitted in this Program as a part of the annual collection. Supplemental data relating to police killed are obtained by means of a special questionnaire. Additional details regarding police deaths derived from this survey are presented earlier in this bulletin.
